

The TSK Model HLC-802 is a low cost universal high-speed liquid chromatograph that enables complete versatility in all modes of analytical separation such as adsorption, partition, ion-exchange and gel permeation. This modular system features a constant flow pulseless 5000 psi pump, a double pressed septum injection device, and a drop-counting flow monitor, making it suitable for high performance liquid chromatography. Using an optional minicomputer HLC-CP-8, concentrations, molecular weight distributions, and peak area ratios can be easily read out with accuracy.
